

**International Society for Clinical Densitometry
Technologist of the Year**

The International Society for Clinical Densitometry (ISCD), the world's leading organization in the field of bone densitometry, honored our very own Sharon Wartenbee on Saturday, March 13, 2010 with the prestigious "Technologist of the Year" award. The award was presented in San Antonio, Texas with over 800 physicians and technologists attending the ceremony

This award is presented each year to an exceptional ISCD technologist who has a proven track record of distinguished service in the field of densitometry, specifically, in the areas of publication, education, or leadership. These annual award recipients are selected competitively by the ISCD awards committee from nominations made by their peers.

Matt Berry, President of the SDSRT (South Dakota Society of Radiologic Technologists) said, "South Dakota has a lot to be proud of in Sharon Wartenbee. She is a great role model for our profession and someone I admire greatly. Sharon is someone who is committed and strives to do what is right for all of us and for this I thank her."

Sharon Wartenbee currently works as a diagnostic radiologic technologist and bone densitometry technologist at Avera McGreevy Clinic in Sioux Falls. She is actively involved in many committees and organizations in her profession as well as authoring several professional articles and will be a contributing author of the bone densitometry section in the 12th edition of Merrill's Atlas of Radiographic Positioning & Procedures.
